

# Thunderbird

## prerequisiti

1.

Google ha recentemente aggiornato le politiche di accesso, inibendo di fatto anche Thunderbird. per riabilitarlo si deve permettere l'accesso a questo tipo di app qui:  
<https://www.google.com/settings/security/lesssecureapps>.

2.

Abilitare l'IMAP da <https://mail.google.com/mail/u/0/#settings/general> sotto : Inoltro e POP/IMAP → Attiva IMAP

## Mail

- Da Edit → account settings → Account Actions → Add Mail account

Your name:  Your name, as shown to others

Email address:

Password:

☒ Remember password

Looking up configuration: Email provider

- Impostare la configurazione manuale

The image shows the Thunderbird account setup window. At the top, there are fields for 'Your name' (mario.rossi@unitn.it), 'Email address' (mario.rossi@unitn.it), and 'Password' (masked with dots). Below the password field is a checkbox labeled 'Remember password' which is checked. The bottom section is divided into two columns. The left column has 'Incoming' (IMAP) and 'Outgoing' (SMTP) settings. The right column has 'Server hostname', 'Port', 'SSL', and 'Authentication' settings. The 'Incoming' section shows 'imap.gmail.com' on port 993 with SSL/TLS. The 'Outgoing' section shows 'smtp.gmail.com' on port 465 with SSL/TLS. Below these, there are 'Username' fields for both incoming and outgoing, both set to 'mario.rossi@unitn.it'. At the bottom, there are buttons for 'Get a new account', 'Advanced config', 'Cancel', 'Re-test', and 'Done'. A large blue arrow points from the 'Done' button towards the right.

Your name:  Your name, as shown to others

|                | Server hostname | Port | SSL     | Authentication  |
|----------------|-----------------|------|---------|-----------------|
| Incoming: IMAP | imap.gmail.com  | 993  | SSL/TLS | Normal password |
| Outgoing: SMTP | smtp.gmail.com  | 465  | SSL/TLS | Normal password |

Username: Incoming:  Outgoing:

- Premere done/fatto

## Calendario

Vanno prima installati i plugins **Lightning** e **Provider for Google Calendar** da Tools → Add-ons poi si procede ad aggiungere un calendario.

- impostare un calendario: File → new → calendar

The image shows the 'Create a new calendar' dialog box. It has a title bar 'Create a new calendar' and a subtitle 'Locate your calendar'. The main text says 'Your calendar can be stored on your computer or be stored on a server in order to access it remotely or share it with your friends or co-workers.' Below this, there are two radio buttons: 'On My Computer' (unselected) and 'On the Network' (selected). At the bottom, there are 'Cancel' and 'Next' buttons.

Create a new calendar

Locate your calendar

Your calendar can be stored on your computer or be stored on a server in order to access it remotely or share it with your friends or co-workers.

☐ On My Computer

☒ On the Network

**Create a new calendar**  
Locate your calendar

Provide info about what is needed to access your remote calendar

Format: ☐ iCalendar (ICS)  
☐ CalDAV  
☐ Sun Java System Calendar Server (WCAP)  
☒ Google Calendar  
☐ Microsoft Exchange 2007/2010/2013

Please advance to the next step to set up your calendars.

Cancel

Back

Next

- selezionare l'utente e i calendari che volete avere in Thunderbird.
